<ul style="list-style-type: none"> It is permissible to allow sufficient open-circuit rest time after the completion of discharge at cycle 50, so as to start cycle 51 at an exact two-week interval. A similar procedure may be adopted at cycles 100, 150, 200, 250, 300, 350, 400 and 450. If cell discharge voltage drops below 1.0 V/cell, discharge may be discontinued.
